

# 24 Days of Puzzles

## Day 1 – Even's Only

Use each of the numbers 2, 4, 6 and 8 once and only once along with any combination of the arithmetic operators + - \* / and at most one set of parenthesis ( ) to make each number 1 through 10

For example, here are two ways to make the number 10

$$8 * 4 / 2 - 6 \quad \text{and} \quad (8 - 6) * 4 + 2$$

Good Luck!
