Day 13 – Math Riddles

Answer each with number or a single word!

Good Luck!

What 4-digit number becomes a palandrome when 1 is either added OR subtracted?

What is the only number whose name is the number of letters in it?

What is the only number whose name is twice the number of letters in it?

Cats have four, you have two and this has three! What can this be??

If a foot and a year were the same, then an inch could go by this name.
