

24 Days of Puzzles

Day 8 – Odd's Only

Use each of the numbers 3, 5, 7 and 9 once and only once along with any combination of the arithmetic operators + - * / and at most one set of parenthesis () to make each number 1 through 10

For example, here are two ways to make the number 8

$$9 - 3 + 5 + 7 \quad \text{and} \quad 5 * 7 - 3 * 9$$

Good Luck!
